

ILX Construction Training™ – Your complete construction resource library

The Flood Claims Adjusting profession requires a solid understanding of building structure, components, materials, electrical, plumbing and HVAC systems. Adjusters are not required to be experts in these areas, but, one must have the basic understanding of construction concepts, processes and costs involved in order to effectively write estimates.

Having a good reference base to draw on when needed is invaluable. ILX Construction Training is the award-winning pioneer in multimedia construction training for the residential and light construction industries. This video based program takes students to the jobsite making even the most difficult construction topics easy to understand. From excavating to installing the outlet covers, ILX construction training walks users through the construction process at their own pace. Knowledge is tested with quizzes and exams.

ILX Construction Training's huge library of courses allows you to design your own instruction to meet your specific needs. The courses may be taken over and over again as the need arises. Certain topics will be of tremendous value to Adjusters, such as Course 4: Home Construction Overview, but, others, will not require as much detailed knowledge.

This extensive training program includes more than 40 hours of valuable information, including quizzes and exams. The construction information you need will be available to you 24 hours a day 365 days a week arming you with the knowledge to tackle any estimate with confidence.
